Regarding: **Product Overview and Certification Reference**

This document provides clarification regarding the regulatory applicability of test reports and certifications associated with the Fluke Networks Versiv 2 Mainframe Unit to all related module-based product models.

The Versiv 2 Mainframe Unit is the primary host platform that contains the integrated Wi-Fi radio and all associated RF circuitry. It serves as the central processing and communication unit for the system. The platform also includes a remote unit and various interchangeable modules that are used for different measurement applications.

Please note the following:

- The Versiv 2 Mainframe Unit supports the following wireless technologies: Bluetooth Low Energy (BT LE), Wi-Fi 2.4 GHz, and Wi-Fi 5 GHz.
- The Versiv 2 Mainframe Unit holds FCC certification under FCC ID: T68-VERSIV2.
- The Versiv 2 Mainframe Unit contains the only intentional radiator (Wi-Fi radio) within the system.
- All RF-related characteristics, including frequency, output power, and emissions are defined and controlled by the mainframe unit.
- The remote unit operates as a companion device and does not introduce independent RF transmission characteristics.
- The interchangeable modules are plug-in accessories that connect to the back of the Versiv 2 Mainframe Unit.
- These modules do not contain any radio transmitters or independent RF circuitry.
- The modules do not alter, modify, or impact the RF performance of the mainframe unit.

All regulatory evaluations have been performed on the Versiv 2 Mainframe Unit. Therefore, the applicable certification documentation, including all RF test reports and regulatory approvals associated with the Versiv 2 Mainframe Unit, are valid and applicable to all module-based product models that utilize this platform, as they do not impact on the RF characteristics or compliance status of the system.
